

37 C.F.R. 1.121(c)(1)(i)

"Clean" version of Amended Claims

Sub C37
B1 2. The form with integrated label of Claim 1 wherein at least the top surface of the patch layer and the top and bottom surfaces of the form layer are adapted to accept printed indicia thereon.

Sub 7
B2 6. The form with integrated label of Claim 1 wherein the patch layer is composed of an opaque material and is sized and offset in relation to the die cut in the form layer such that a distance between an edge of the patch layer and a corresponding edge of the form layer portion is greater than distances between other patch and corresponding form layer edges, such that when the label is removed, the adhesive layer exposed on the bottom side of the patch layer is wider along one edge of the patch layer than along other edges.

7. The form with integrated label of Claim 1 wherein the patch layer is sized and offset in relation to the die cut in the form layer such that a distance between an edge of the patch layer and a corresponding edge of the form layer portion is less than distances between other patch and corresponding form layer edges, to allow for easier removal of the label from the form.

Sub 47
B3 12. A form with integrated fold-over card intermediate comprising:
a form layer having top and bottom surfaces and a periphery;
at least one die cut through the top and bottom surfaces of the form layer within the periphery of the form layer defining at least one portion of the form layer within the die cut;
a patch layer, having first and second halves, a periphery and top and bottom surfaces;

a layer of repositionable, peelable adhesive wherein the bottom surface of the first half of the patch layer is adhesively but removably secured to the top surface of the form layer over the entire die cut and the entire form layer portion;

the bottom surface of the second half of the patch layer being secured to the top surface of the form layer by the adhesive layer over neither the die cut nor the form layer portion;

B3 the patch layer, adhesive layer and form layer portion comprising the fold-over card intermediate;

wherein the adhesive layer has a greater affinity for the bottom surface of the patch layer than the top surface of the form layer such that when the fold-over card intermediate is removed from the form layer, the portion of the adhesive layer that is not between the patch layer and the form layer portion is exposed and stays adhered to the bottom surface of the patch layer;

wherein once removed from the form layer, the fold-over card intermediate can be folded in half, thus securing the first half and second half of the patch layer together by the adhesive layer and enclosing the form layer portion between the folded halves of the patch layer.

Sub C57
B4 15. The form with integrated fold-over card intermediate of Claim 12 or 13 wherein at least the top and bottom surfaces of the form layer and the top surface of the patch layer are adapted to accept printed indicia thereon.
